1. An **examiner's amendment** to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Rick Treanor on 11/14/11 (message on 11/10/11).

**In the claims:**

In **claim 1, line 16**, insert --the-- before "deposits"; & in **line 17**, insert --the-- before "waiting phases".

In **claim 3, line 3**, insert --of about 20°C-500°C-- after "low-temperature".

In **claim 10, line 4**, after "structure" insert --to form a resulting structure--.

In **claim 12, line 4**, after "structure" insert --to form a resulting structure--.

In **claim 13, line 18**, insert --the-- before "deposits"; & in **line 19**, insert --the-- before "waiting phases".

In **claim 14, line 3**, insert --of about 20°C-500°C-- after "low-temperature".

In **claim 18, line 4**, after "structure" insert --to form a resulting structure--.

In **claim 20, line 4**, after "structure" insert --to form a resulting structure--.

2. The following is an examiner's statement of **reasons for allowance**: applicants' 9/22/11 amendment has added the limitations & concepts as discussed in the 7/27/11 interview, thus removing previously applied prior art. Update & further review of the prior art did not find any prior art or combination thereof which would reasonably read on the claims as now written, thus the amended claims are considered to be allowable over the prior art, with the above amendments to fix unclear antecedent basis or provide a clear scope to the relative term of "low-temperature" employed to describe the type of

Art Unit: 1717

hydrogen plasma used for one of the claimed techniques of separating the catalyst structure. Support for the amended range for low-temperature H-plasma is found on page 7, lines 10-13 of the original specification, with further exemplary or typical temperatures of 300°C mentioned on page 4, lines 15-18 or in Exs. 2 or 3. The examiner also notes that as the 9/22/11 amendments have made the independent claims allowable, which relate to the generic "separating" techniques & generic formation of the catalytic structure, which can then be used to either form the carbon nanotubes or carbon fibers; or catalytic material can then be oxidized & polished; hence the nonelected species are recombined, noting the above amendments are required for clarity of these not previously considered limitations.

Other art of interest to the state-of-the-art for creating particulates on a support from vapor deposited materials, but does not employ all the presently claimed processing features, as well as not being prior art with respect to this 371 application, include **Pan et al.** (7,951,422 B2 & 2008/292835 A1) or **Golovchenko et al.** (2006/0006377 A1), who both employ their resultant structures as catalysts for carbon nanotubes formation; or **Huotari et al.** (7,923,382 B2), who performs ALD deposition of metal oxide (i.e. a sequence of deposits) that are then reduced to metal under conditions where the agglomeration ( $\equiv$  droplet-shaped body formation) occurs, but this is the reverse of the claimed oxidation option; or **DelHagen et al.** (2011/0111300 A1), who uses surface conditions, inclusive of surface tension ([0018] & claims) to enhance the nucleation of the active material that includes catalysts; & **Lin et al.** (2011/0171494 A1), who also employs surface energy differences in order for it to create well separated & discontinuous islands of material via vacuum annealing, but where the particles formed are ferromagnetic materials, instead of the claimed catalytic material.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
